

POD CODE OF PRACTICE - FOAMEX

EPS POD DISTRIBUTION AND CLEAN UP RESPONSIBILITIES

As an industry, we all have a role to play to ensure that we are taking responsibility to keep our environment clean for a sustainable future.

THE DEVELOPER

- Consider the installation of perimeter fencing to the development of the site to safeguard the environment

THE POD SUPPLIER

- Deliver goods and bags for clean up on site and secure them in place by the approved method*

THE BUILDER

- Manage the use of products on site. Ensure StyroPods are secure using the approved tie down method at all times.
- Pack up scrap pods and any off cuts and place into bags as provided by the supplier. Secure with approved tiedown method.
- Notify supplier that unused pods and off cuts are ready to be collected.
- Intact StyroPods, along with off cuts to be secured by approved method ready for collection to avoid being blown off site.
- All recyclable EPS is to be kept separate from other materials.
- Only clean EPS waste will be collected from the site. Bags containing products other than EPS off cuts will not be collected.
- Filled scrap bags should be left at the front of the site and tied down accordingly per picture to make it both safer and more efficient for collecting the scrap bags.
- Ensure bags are tied to prevent them filling with water if it rains.

EPS COLLECTION

- EPS offcuts and unused StyroPods will be collected for recycling within a 48 to 72 hour time frame from notification

*Approved method for securing pods will vary from state to state. See approved method for supplier attached.

** Contaminated EPS refers to EPS that is attached to concrete, metal, adhesives or other products.

The Code of Practice is endorsed by Expanded Polystyrene Australia (EPSA) <http://epsa.org.au/>

IMPORTANT: Contaminated EPS should not be placed into the general waste stream.**

1300 AU FOAM

Divert your polystyrene waste from landfill. Recycle with us. We will turn it back into sustainable building products for energy efficient homes.
