

WHAT TYPES OF EXPANDED POLYSTYRENE CAN BE RECYCLED?

While expanded polystyrene (EPS) is 100% recyclable, we can not accept waste that has been contaminated. So it is important to check that your polystyrene can be recycled. Below is a list of what can, and what can't be recycled.

- Packaging for small & large appliances (eg., big screen TV's, dishwashers & oven packaging)
- White polystyrene fruit & vegetable boxes (clean boxes only - all organic material & labels must be removed prior to recycling)
- Uncontaminated (eg, mud and concrete free) expanded polystyrene (EPS) from building & construction sites
- Bean bag beans

- Coloured polystyrene
- Food packaging
- Peanut-shaped loose foam packaging
- Meat trays
- Tape or strapping
- Plastic or foam wrapping
- Any EPS products that feature paper/plastic labels
- Polystyrene covered in dirt, concrete or cement
